Full-Stack & Native Apps Engineer | React Native • MERN • Next.js |
Building Scalable SaaS & Mobile Solutions for Startups
Hyderabad, Telangana, India

Summary

I've found that the best products aren't built by people who just "write code"—they're built by people who understand how technical decisions impact the bottom line. Whether it's architecting a mobile app for a venture-backed startup or building a scalable SaaS from the ground up, I focus on the moves that lead to long-term growth.

I specialize in the JavaScript ecosystem (React Native, Next.js, MERN), but I view frameworks simply as tools to solve business problems. My goal is to bridge the gap between a high-level vision and a production-ready system that stays stable under pressure.

The kind of problems I enjoy solving:

- * **Scaling Architecture:** At Vela (formerly Reewild), I re-engineered legacy systems to be AI-agent ready. This didn't just modernize the stack; it slashed token consumption costs by 45% and allowed the team to ship features 12% faster.
- * **Performance & Friction:** I'm obsessive about the user experience. I audited a complete mobile ecosystem to strip out 100MB of unoptimized bloat. Every megabyte removed is a barrier lowered for a new user.
- * **Rapid Product Iteration:** I thrive in the "0-to-1" phase. I've taken complex ideas, like an **OCR-based receipt scanning system, and moved them from concept to production in a two-week sprint, driving immediate spikes in daily active usage.
- * **Infrastructure Ownership:** I manage the full lifecycle, from high-fidelity frontends to AWS deployments (EC2, S3, VPC). I believe a developer should be able to fly the plane they built.

Perspective:

When I'm not at my terminal, you'll likely find me over a chessboard or lost in a book. I enjoy both for the same reason I love engineering:

they require the focus to see the current board clearly and the strategy to plan three moves ahead. I bring that same calculated, logical approach to every codebase I touch.

Let's connect:

I'm currently open to high-impact full-time roles and selective freelance partnerships. If you need someone who views your codebase as a product and your infrastructure as a strategic asset, let's talk.

Experience

Vela (formerly Reewild)

1 year 5 months

Software Engineer

August 2025 - Present (10 months)

Hyderabad, Telangana, India

- #Streamlined the development-to-deployment pipeline, implementing CI/CD and OTA updates that cut internal testing cycles by 20% and ensured high-velocity shipping of app updates without requiring manual Store submissions for every iteration.
- #Migrated legacy architecture to a modern, scalable architecture, significantly improving overall app performance and maintainability.
- #Transformed the codebase to be agent-ready (AI-integrated workflows), enabling faster feature delivery (~12% improvement in development velocity) while reducing token consumption by 45%, optimizing both cost and efficiency.

Software Engineer Intern

January 2025 - July 2025 (7 months)

London Area, United Kingdom

- #Architected the frontend for the 'Planet Points' product launch, translating brand vision into a high-fidelity, intuitive interface; utilized React Native to deliver a seamless user experience that served as the primary catalyst for a 30% growth in user acquisition during the pilot phase.
- #Rapidly engineered and deployed the 'Receipt Scanning' ecosystem within a 2-week sprint, managing the end-to-end integration of camera-based OCR

libraries and backend reward APIs; drove an immediate 15% surge in daily active usage by delivering a high-gratification user experience.

- #Executed a comprehensive optimization of the application architecture, auditing legacy dependencies and unoptimized assets to slash the app bundle size by 100 MB. This refactor improved local build and deployment efficiency by 10%, while significantly reducing install-time friction for users.

PSS TECHNO SERVICE

Web Developer

October 2024 - December 2024 (3 months)

Noida, Uttar Pradesh, India

- #Built and maintained dynamic websites for clients using React and PHP, tailored to business-specific needs

- #Delivered clean, responsive UIs with optimized performance across devices

BonaSys IT Solutions Pvt. Ltd

Full-stack Developer

February 2024 - May 2024 (4 months)

Indore, Madhya Pradesh, India

ASIMOV ROBOTICS CLUB MITS

Frontend Developer

July 2021 - May 2022 (11 months)

Gwalior, Madhya Pradesh, India

- # Collaborated closely with the design team to conceptualize the club website design.

- # worked on the frontend part of the website using ReactJs

Education

Madhav Institute of Technology and Science, Gwalior

Bachelor of Technology - BTech, Computer Science · (January 2021 - June 2024)
